U.S. Director of Climate and Health

Health Care Without Harm | Practice Greenhealth

As the only sector with healing as its mission, health care has an opportunity to use its ethical, economic, and political influence to create ecologically sustainable, equitable, and healthy communities.

Health Care Without Harm

1996

Health Care Without Harm works to transform health care worldwide so that it reduces its environmental footprint, becomes a community anchor for sustainability and becomes a leader in the global movement for environmental health and justice.

36,000

Our reach includes 36,000 hospitals and health centers in 60 countries worldwide.

HCWH Network – Sister Organizations

MEMBERSHIP ARM

**PRACTICE
Greenhealth™**

The leading nonprofit membership and networking organization for sustainable health

care, Practice Greenhealth delivers environmental solutions to more than 1,100 members, lending support to create better, safer, greener workplaces and communities.

WORLDWIDE NETWORK

**GLOBAL
GREEN and
HEALTHY
HOSPITALS**

Global Green and Healthy Hospitals is a worldwide network of hospitals, health systems, and health organizations aimed toward building a global community committed to sustainable health care and healthy communities.

GREEN PURCHASING

Created by Practice Greenhealth, Health Care Without Harm, and leading health

systems committed to sustainability, Greenhealth Exchange is a purchasing cooperative that makes buying products and services that are good for people, the planet, and the bottom line much easier.

Our approach | By embedding sustainability into health care operations, we drive the health care sector from within to lead broader societal change.

Innovate

We identify and pilot opportunities for health care to implement economical, science-based solutions to environmental health problems.

Scale

We educate, build implementation tools, train health care professionals, and scale solutions across our national and global health care networks.

Transform

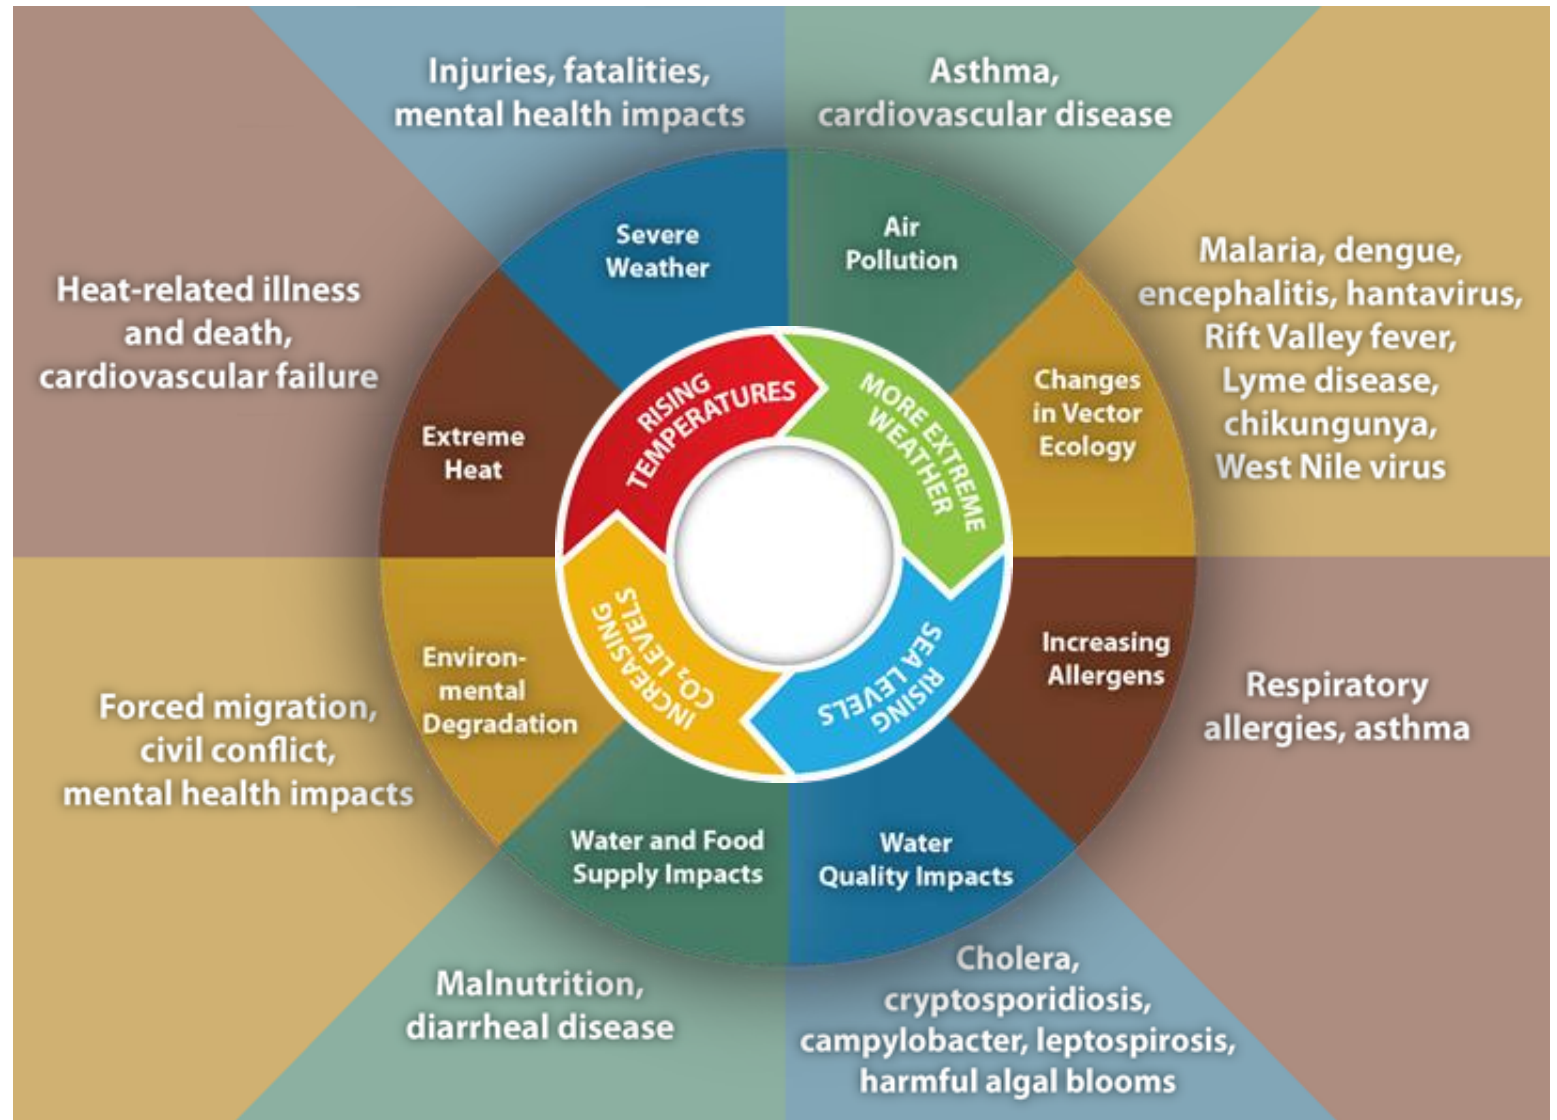

We aggregate the influence and purchasing power of health care to drive the marketplace toward sustainability and policies that will create worldwide change.

U.S. 2019 Billion-Dollar Weather and Climate Disasters

*This map denotes the approximate location for each of the **14 separate billion-dollar weather and climate disasters** that impacted the United States **during 2019**.*

On the front line of climate change

Health care's climate footprint is equivalent to 4.4% of global net emissions

THIS PAPER

- Establishes the first-ever global estimate of health care's climate footprint.
- Is based on full global coverage of spending data, together with detailed information from 43 countries.
- Identifies key sources of health care emissions while allowing for a comparison between nations and among many regions of the world.
- Makes a set of recommendations to align global health goals with global climate goals.

Health Care's Climate Footprint

	Health care country/region emissions by ranking	Total country/region emissions by ranking
1	United States	China
2	China	United States
3	European Union	European Union
4	Japan	India
5	Russia	Russia
6	Brazil	Japan
7	India	Brazil
8	South Korea	Canada
9	Canada	South Korea
10	Australia	Mexico
	Mexico (11)	Australia (17)

Table 1: Top ten health care carbon emitters compared to total top ten emitters

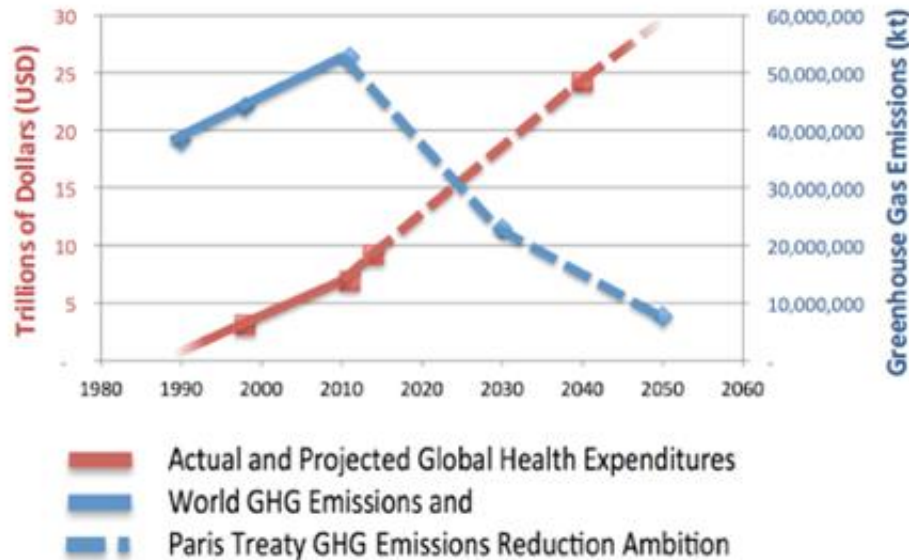

Figure 8: Top ten emitters as percentage of global health care footprint.

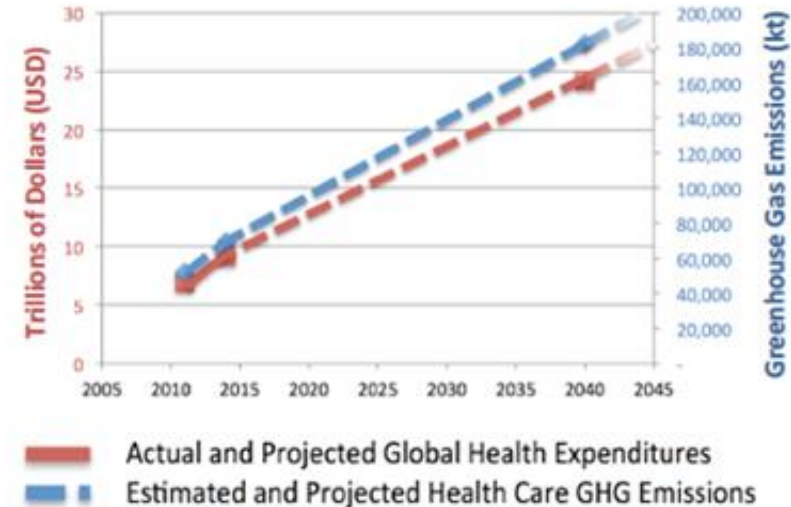

Business as usual scenario could triple health care's emissions

Global health spending is rapidly growing at the same time that the world is committed to reducing greenhouse gas emissions.

A business as usual scenario could triple health care's already significant contribution to emissions.

Climate-Smart Health Care

We envision health care as a climate-smart, innovative sector that protects public health from climate change and accelerates the transition to a low-carbon economy while improving community resilience, health equity, and access to care.

90% of a child's brain is developed by the time they are 5 years old. High-quality preschool provides a strong foundation.

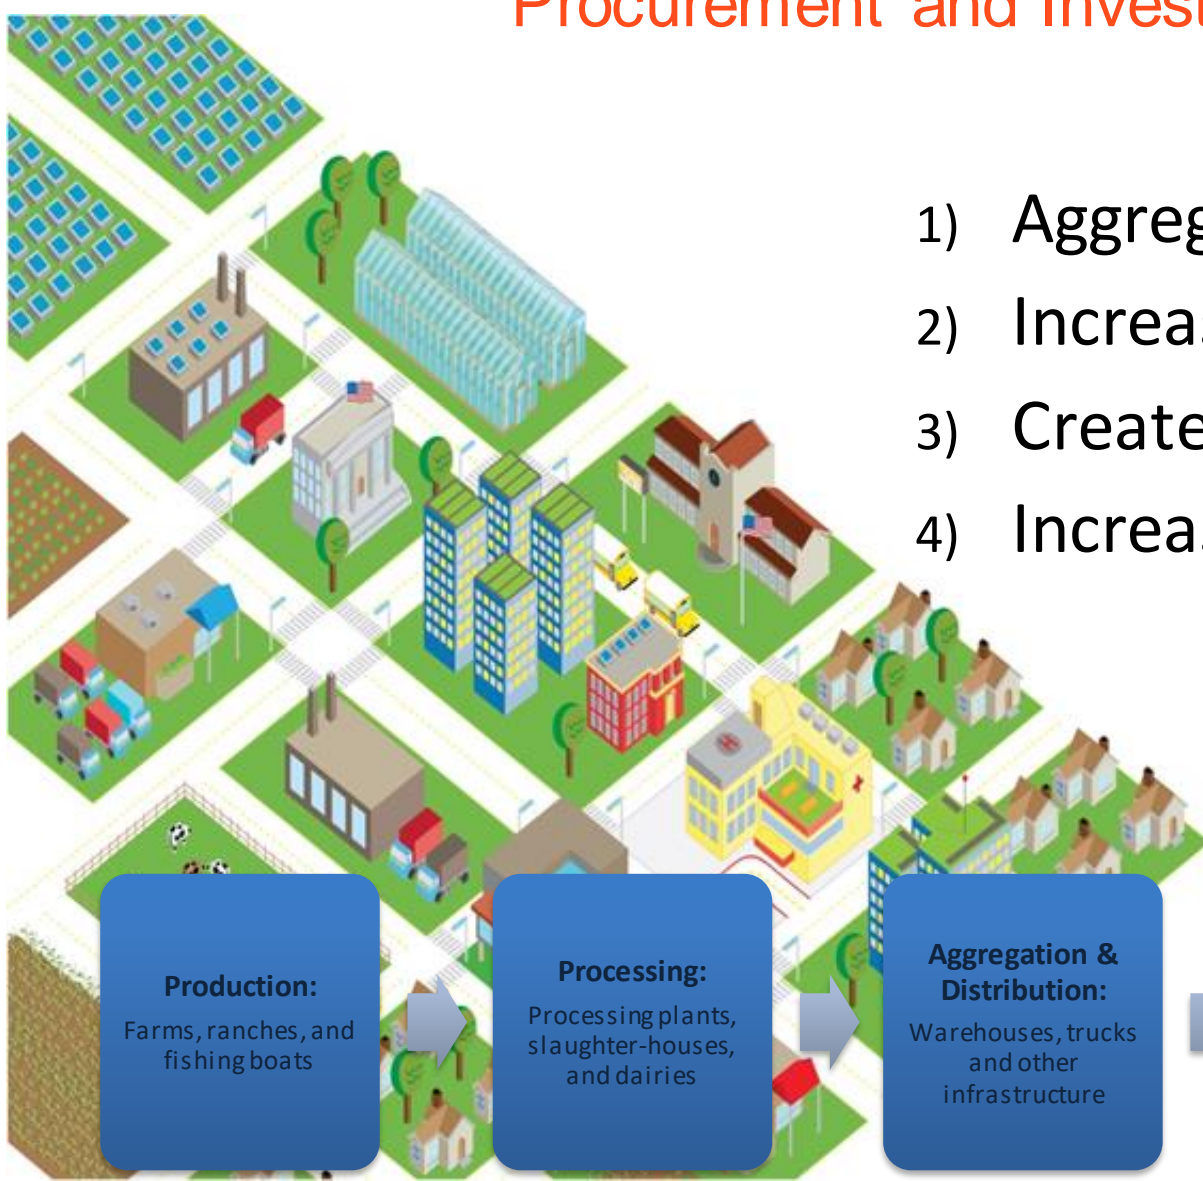

Anchors in Resilient Communities (ARC)

A multi-stakeholder initiative that addresses the social determinants of health by leveraging the assets and capacities of Bay Area anchor institutions and community-based partners, with a focus on expanding community wealth and ownership, improving health outcomes, and strengthening the capacity of communities of color and low and moderate-income residents to be resilient in the face of climate and economic disruption.

Localizing the Food Economy

Procurement and Investment: *A Powerful Combination*

- 
- 1) Aggregate demand for healthy food products
 - 2) Increase community access to healthy foods
 - 3) Create jobs for community residents
 - 4) Increase markets for local producers

Food Processing Center

- 56,000 sq. ft - Food processing, Meal Preparation & Food Business incubator
- 200,000 healthy, locally-sourced, prepared meals for hospitals, school districts, senior centers, military personnel
- Community participation from the start – cooperative ownership model, job training, collaboration with existing food system infrastructure and production
- Starting with 20+ union employees – growing to 250+ employees
- **Opening in Fall 2020**

SOLVING THE CLIMATE CRISIS

The Congressional Action Plan for a Clean Energy Economy and a Healthy, Resilient, and Just America

Majority Staff Report

April 23, 2018

Dear Senator:

Clean air is fundamental for good health, and the Clean Air Act promises all Americans air that is safe to breathe. The undersigned public health and medical organizations urge you to **oppose S. 263, the so-called "Ozone Standards Implementation Act of 2017."** A more fitting name for this legislation would be the "Smoggy Skies Act," as it delays lifesaving standards to reduce ozone pollution, or smog, and permanently weakens the Clean Air Act.

Logos of supporting organizations: Allergy & Asthma Network, American Academy of Pediatrics, American Lung Association, APHA, Alliance of Nurses for Healthy Environments, Asthma and Allergy Foundation of America, Center for Climate Change & Health, Children's Environmental Health Network, ATS, NACCHO, National Environmental Health Association, NMA, National Medical Association, Health-Care Without Harm, PSR, and Trust for America's Health.

U.S. CALL TO ACTION ON CLIMATE, HEALTH, AND EQUITY: A POLICY ACTION AGENDA

2019

Climate change is one of the greatest threats to health America has ever faced—it is a true public health emergency. The health, safety and wellbeing of millions of people in the U.S. have already been harmed by human-caused climate change, and health risks in the future are dire without urgent action to fight climate change. As former Surgeon Generals Richard Carmona and David Satcher said: "We're all at risk and our leaders must lead on global warming. Now." But the health crisis caused by climate change also presents a major health opportunity. Building healthy energy, transportation, land use, and agriculture systems now will deliver immediate and sustained health benefits to all and reduce future health risks from climate change.

Join our Physician Network

As trusted leaders, physicians have a unique opportunity to advance health care sustainability and to influence public policy to protect the health of their patients.

Health Care Without Harm's Physician Network supports emerging and established physician leaders in leveraging their influence and expertise to advance the growing health care sustainability movement and to create climate-smart health care. The Physician Network brings physicians together to share best practices and to inspire one another in advocating for a sustainable and healthy future.

While physicians take an oath to "do no harm," the enormous environmental impact of health care operations in the United States is contributing to the burden of disease and harming the health of patients and communities. The health care sector produces an estimated 10 percent of U.S. greenhouse gas emissions, and hospitals consume more than 8 percent of the total energy use of all commercial buildings in the United States.

Leading hospitals have been working to reduce their environmental impact, and physicians can be powerful champions to support the transition to environmentally sustainable health care both inside and outside of their health care settings. As an article in the *AMA Journal of Ethics* points out, "physicians and health organizations have obligations to use their influence, expertise, and resources to protect health, which includes promoting sustainability."

Get involved

- Join our network.
- Join our Facebook group.
- Plan to network with other physicians and sustainability leaders at CleanMed.
- Tell us about your sustainability work.
